Ejercicio 1 Mayor de dos números

The screenshot shows a code editor with a file named `p1.py`. The code is written in Python and implements a logic to find the maximum of two numbers, `num1` and `num2`. The code is as follows:

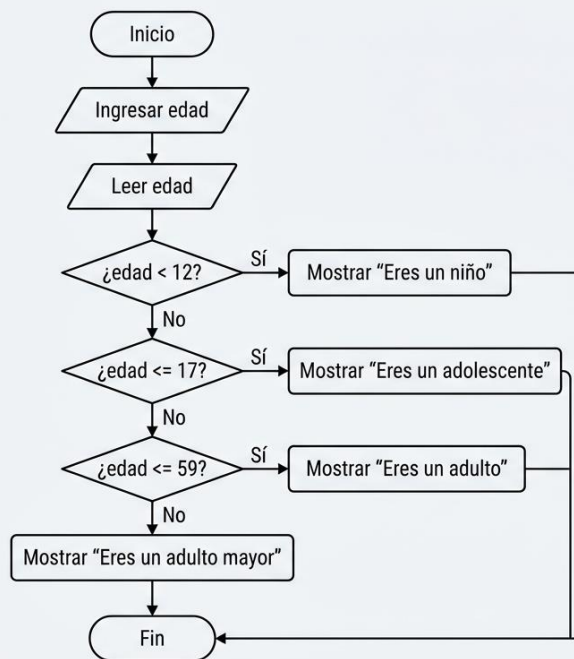

```
1 Inicio
2 solicitar al usuario que ingrese 2 números enteros
3 Leer num1
4 Leer num2
5 Si num1 > num2 entonces
6     Mostrar "El número mayor es: ", num1
7 Sino
8     Si num2 > num1 entonces
9         Mostrar "El número mayor es: ", num2
10        Sino
11            Mostrar "Ambos números son iguales."
12        Fin Si
13 Fin Si
14 Fin
```

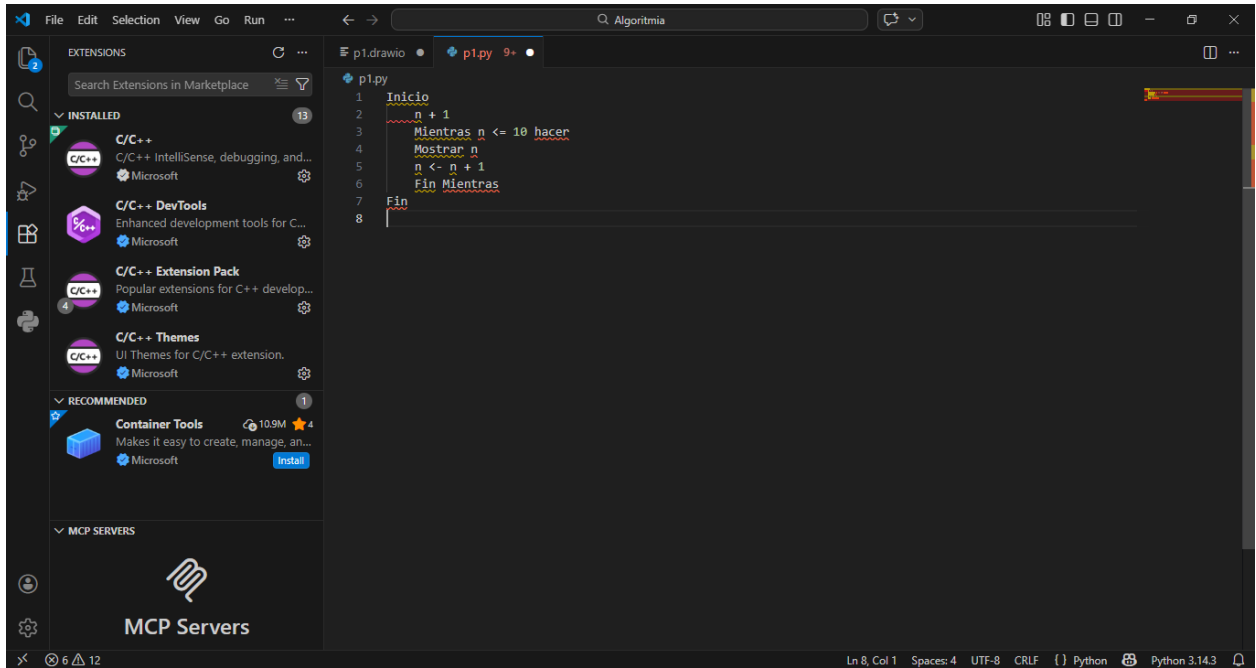

Ejercicio 2 Clasificación de edad

The screenshot shows the Visual Studio Code interface. On the left, the 'EXTENSIONS' sidebar is open, displaying a list of installed and recommended extensions for C/C++. The main editor area shows a file named 'p1.py' with the following code:

```
1 Inicio
2 Ingresar edad
3 Leer edad
4 Si edad < 12 Entonces
5     Mostrar "Eres un niño"
6 Sino
7     edad <= 17 Entonces
8     Mostrar "Eres un adolescente"
9     Sino edad <= 59 Entonces
10        Mostrar "Eres un adulto"
11    Sino
12        Mostrar "Eres un adulto mayor"
13    Fin Si
14 Fin
15 Fin
```

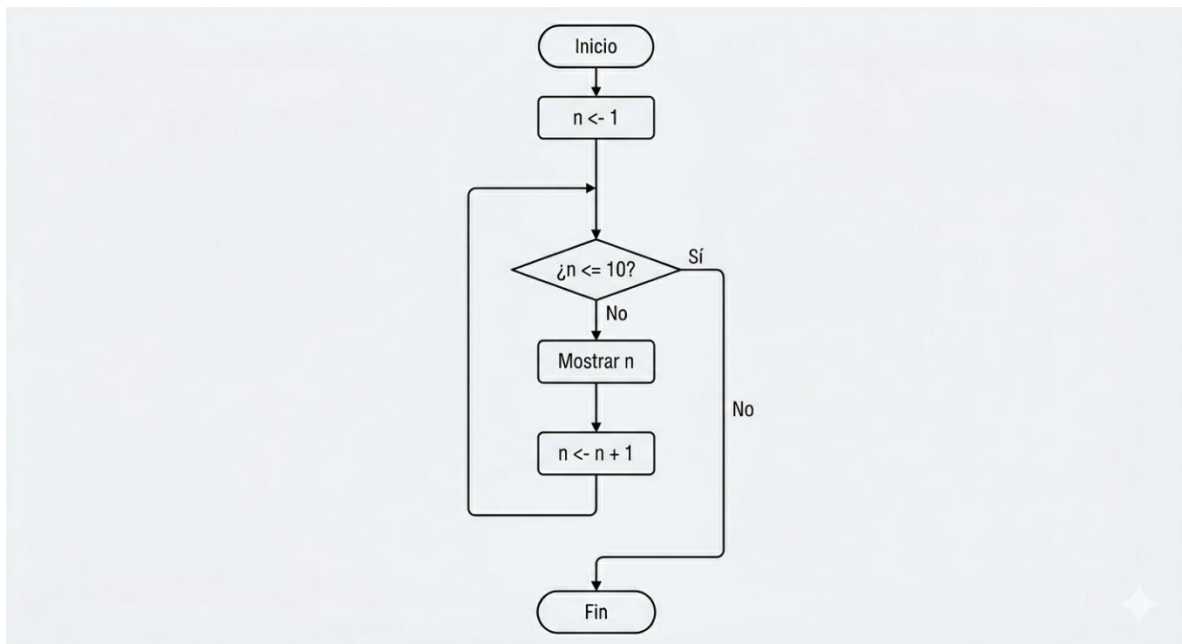

Ejercicio 3: Números del 1 al 10

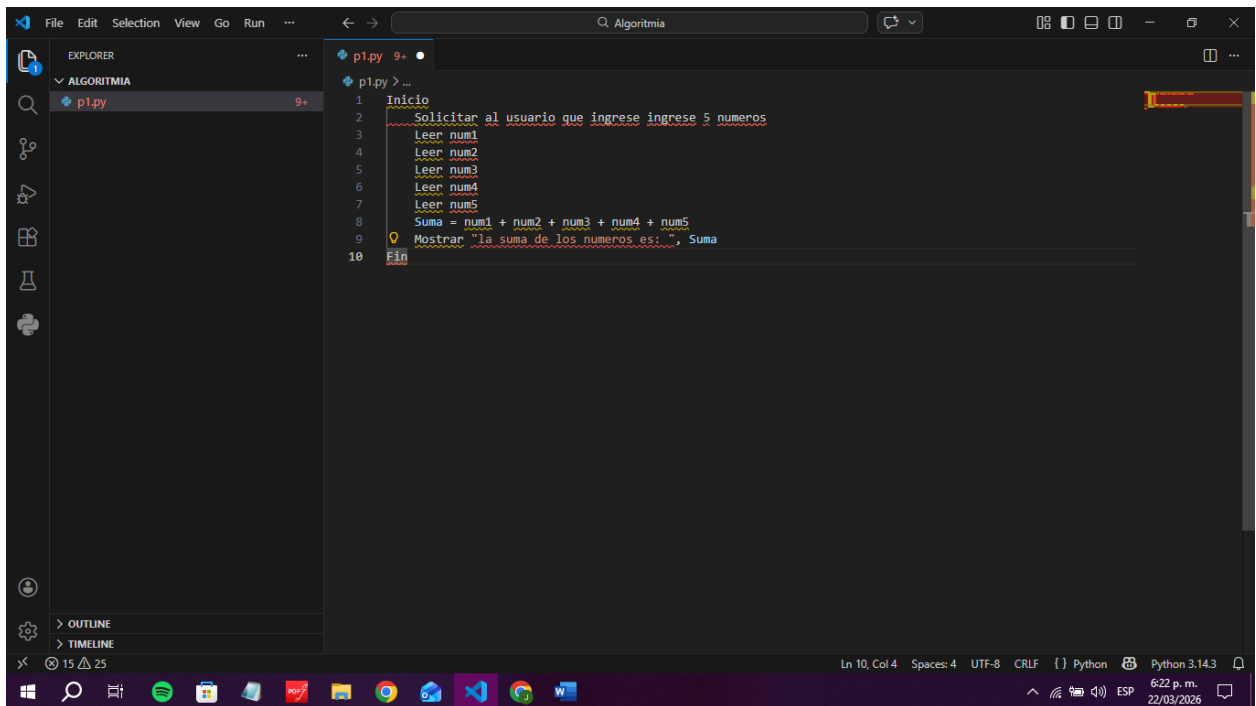

The screenshot shows the Visual Studio Code interface. On the left, the 'EXTENSIONS' sidebar is open, displaying a list of installed and recommended extensions for C/C++ development, including 'C/C++', 'C/C++ DevTools', 'C/C++ Extension Pack', 'C/C++ Themes', and 'Container Tools'. The main editor area shows a file named 'p1.py' with the following Python code:

```
p1.py
1  Inicio
2      n = 1
3      Mientras n <= 10 hacer
4          Mostrar n
5          n <- n + 1
6      Fin Mientras
7
8  Fin
```

The status bar at the bottom indicates the current line and column (Ln 8, Col 1), the file encoding (UTF-8), the line ending (CRLF), the programming language (Python), and the Python version (Python 3.14.3).

Ejercicio 4: Suma de 5 números

The screenshot shows a code editor with a file named 'p1.py'. The code is written in Python and follows these steps: 1. 'Inicio' (Start). 2. 'Solicitar al usuario que ingrese 5 numeros' (Request the user to enter 5 numbers). 3. 'Leer num1, num2, num3, num4, num5' (Read num1, num2, num3, num4, num5). 4. 'Suma = num1 + num2 + num3 + num4 + num5' (Calculate the sum). 5. 'Mostrar "la suma de los numeros es:", Suma' (Display the sum). 6. 'Fin' (End). The code is as follows:

```
1 Inicio
2 Solicitar al usuario que ingrese 5 numeros
3 Leer num1
4 Leer num2
5 Leer num3
6 Leer num4
7 Leer num5
8 Suma = num1 + num2 + num3 + num4 + num5
9 Mostrar "la suma de los numeros es:", Suma
10 Fin
```

Ejercicio 5: Contador de números positivos

```
1 Inicio
2 contador = 0
3 ingresar numero
4 leer numero
5 mientras numero > 0 entonces
6     Si numero > 0 entonces
7         contador = contador + 1
8     Fin Si
9
10 Leer numero
11 fin mientras
12 mostrar ("cantidad de numeros positivos: ", contador)
13 Fin
```

The screenshot shows a code editor with a Python file named p1.py. The code implements a loop that reads numbers until a non-positive number is entered, counting the positive ones. The interface includes a sidebar with Explorer, Search, and Run and Debug views, and a status bar at the bottom showing file encoding and line numbers.
